Problem & Motivation

- **Motivation Gap:** Many students struggle with consistency when training solo.
- **Sync Hurdles:** Hard to find peers with similar fitness levels and schedules.
- **Isolation:** Especially difficult for new students to integrate into campus gym life.
- **Specialized Needs:** Difficulty finding partners for specific needs (gender preference, niche sports).

Our Solution

Building Confidence Through Community.

GymBuddy connects Windsor students via a high-performance web platform designed for real-world impact.

Accountability. Connection. Consistency.

Core Features

Smart Profiles

Rich fitness profiles with photo uploads and customizable fitness level tracking.

Advanced Filters

Narrow down buddies by availability, gender, goals, and experience levels.

Workout Booking

Schedule 1-on-1 or group sessions with integrated request management.

Public Ratings

Build trust with a 1-5 star community rating system visible on profiles.

Group Hub

Create or join larger group workouts to build campus micro-communities.

Block & Favs

Personalize your experience with favorite buddies and robust block lists.

Tech Stack

Layer	Technology	Implementation Highlights
Backend	Django + DRF	RESTful API, JWT Auth, Media File Storage
Frontend	Next.js 14	App Router, Server-Side Rendering (SSR)
Database	PostgreSQL	Relational student data & session management
Styling	Tailwind CSS	Utility-first responsive "Buck" UI branding
Storage	Cloudinary/Local	Cloud-based photo handling for profiles

Group Roles

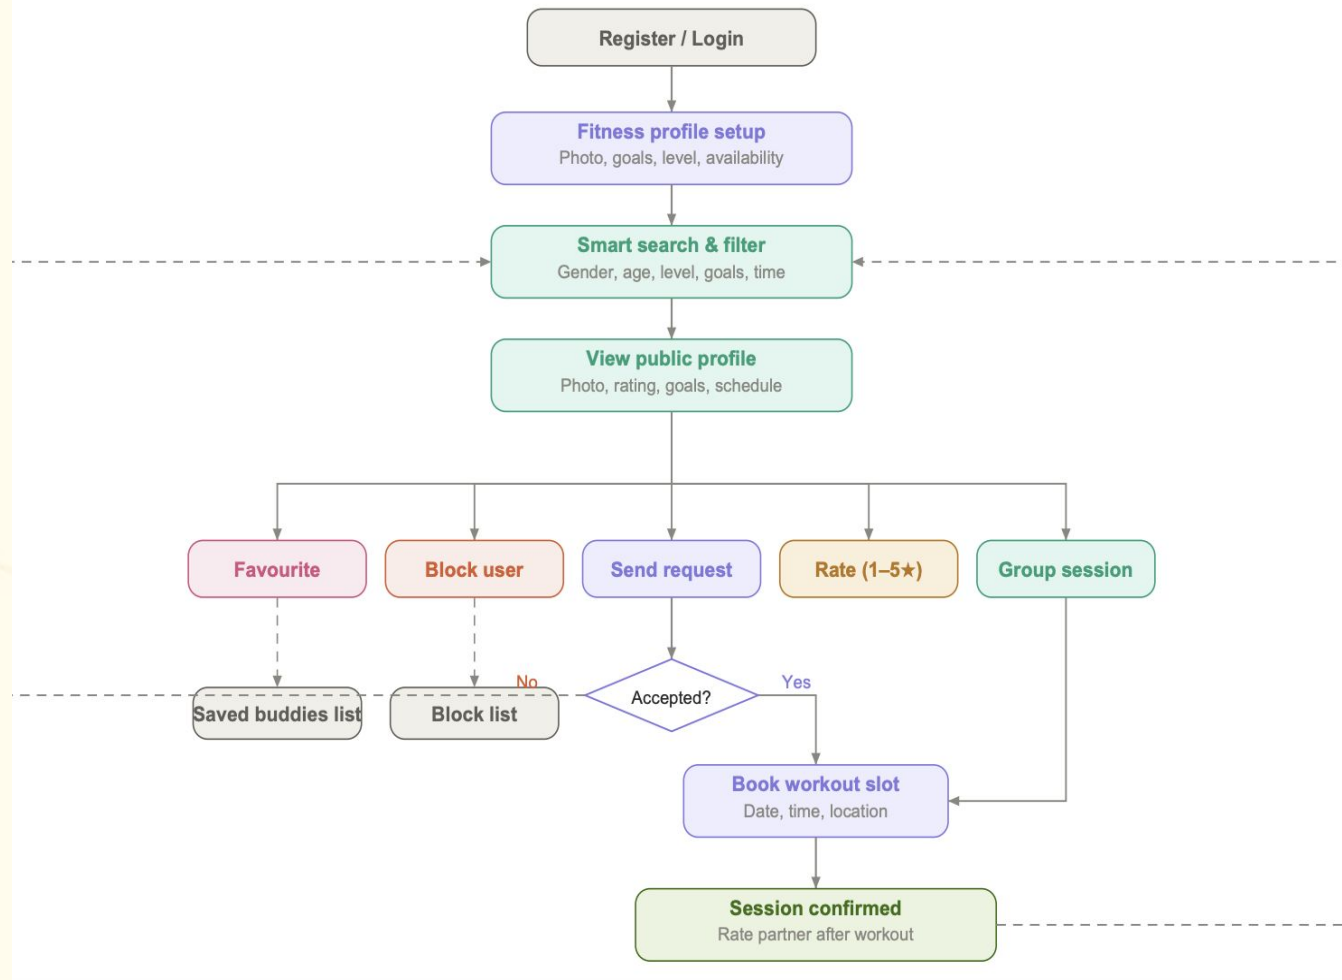

Development Pipeline

Our team follows an Agile workflow, separating Backend API logic from Frontend UI state management.

Member	Role / Responsibility
Chen, Mingran	Django Backend (Models, API)
Shaukat, Abdullah	Auth & Security (JWT, Sessions)
Singh, Harpreet	Frontend UI (Next.js, Tailwind)
Thakur, Chetan	API Integration & Data Fetching
Zhang, Yarong	Search Logic & Media Uploads
